

Table 1: Therapies that may lower natriuretic peptide concentrations.

Therapy	Effect on BNP/NT-proBNP
<b>Diuresis (loop or thiazide)</b>	↓
<b>ACE-I</b>	↓
<b>ARB</b>	↓
<b>β-blockers</b>	Rare transient ↑ within 2 weeks, then ↓; most ↓ without rise
<b>Aldosterone antagonists</b>	↓
<b>Cardiac resynchronization therapy</b>	↓
<b>Exercise therapy</b>	↓
<b>Rate control of atrial fibrillation</b>	↓
<b>BNP infusions</b>	↓ N-BNP, ↑BNP then ↓
